

Flytoget (Airport Express Train)

Flytoget, The Norwegian Airport Express Train, is a high-speed train that transports air passengers to and from Oslo Airport. The train is regarded as an integral part of the Airport and carries around 4 million passengers every year. Key to the Flytoget experience is accurate information and news on its service. The company recently took the decision to replace its outdated TV system with a higher quality LCD solution that would make viewing from different angles easier for passengers.

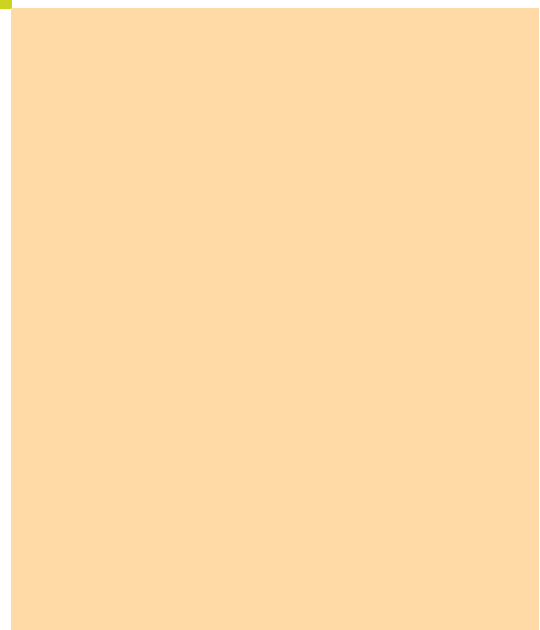

The quality and screen clarity of NEC Display Solutions quickly made the company the optimum choice. As the system needed to accommodate a new video and information system, NEC Display Solutions' ability to provide 50Hz sync for video signals and Sync on green support was also key to the decision. Flytoget selected one hundred and sixty 20" and forty eight 18" NEC LCD monitors and has now integrated these throughout its service.

NEC Display Solutions account manager, Tom Lund, said: "Flytoget needed a very tailored solution and, working with reseller, Control Design, NMD was the only vendor able to satisfy its needs within the timescale. Our unique ability to provide a special monitor exchange service also gave us an immediate advantage."
