CASE STUDY

Seeing Science!

The Science & Natural History Museums are based in South Kensington, London and are two of the most visited museums in the UK. Throughout many years, they have enthralled children and adults with historical and scientific exhibits from across the world – both long-standing and touring exhibitions.

To keep up with the changes in technology and expectations of what a museum should be offering, both museums have invested in interactive exhibits and visitor information points. Using NEC Display Solutions' 15" LCD screens and some touch-screen technology, these information points allow visitors to locate where they are and show them where to go next.

NEC Display Solutions' LCD1510s were used with 150 visitor information points across both museums and were chosen above products offered by Phillips as the quality of the screen provided the viewing quality required and

worked with the touch-screen technology essential to the best visitor experience. NEC Display Solutions' Sales Director, Simon Jackson, said: "Working with Datasonic, one of our resellers, we have been able to provide a simple solution that will make each visitor's experience of exploring both museums easier."
